

## PRESS RELEASE

### **mPower Technologies and PlanSight LLC Develop a New GIS-Based Land Records Portal Application**

*CivX Integrator enables users to build one web portal for multiple data sources including tax roll, tract indexes, grantor/grantee information, and permit data.*

**Appleton, WI February 22, 2006** -- mPower Technologies (link: <http://mpower-tech.com>), a technology consulting firm, software developer, and service organization; and PlanSight LLC (link: <http://plansight.com>), an ESRI authorized developer and provider of a full range of high quality GIS products and consulting services, announce their business partnership today. Together they developed a new GIS-based land records portal application, CivX Integrator, allowing organizations to easily create, manage, distribute, and share GIS-based land records data without expensive and time-consuming programming or outsourced consulting.

Tools within mPower Integrator™ (link: <http://mpower-tech.com/integrator>) combined with software developed by PlanSight provide a sophisticated geographic data distribution and query application. CivX Integrator becomes more than the sum of its parts as a powerful and cost-effective way to distribute database and mapping information through a local network or the Internet. Workload and website implementation times are drastically reduced and revenues increased by quickly and efficiently sharing and distributing data from multiple sources.

Scott Hameister, mPower director of product development, states, "We understand the challenges faced by organizations trying to maintain and distribute data from several different, separate databases. CivX Integrator empowers users and allows them to search and analyze tax roll, tract indexes, grantor/grantee information, permit, and other data, all from one location."

mPower and PlanSight plan a full introduction of their application at the upcoming Wisconsin Land Information Association conference (link: <http://www.wlia.org/AnnualConference/2006.htm>), March 1-3, 2006. mPower and PlanSight customers include public utilities; municipal, county, and federal governments; and real estate developers.

#### **About mPower Technologies:**

mPower Technologies (link: <http://mpower-tech.com>) is a technology consulting firm, software developer, and service organization that draws upon more than 30 years experience in the geospatial industry. They work with their clients to improve and streamline processes to ensure they are the most productive with all available and potential resources.

#### **About PlanSight LCC:**

GIS is all they do at PlanSight (link: <http://plansight.com>). They are a group of innovative professionals striving to provide their clients with a full range of high quality GIS products and consulting services at the most reasonable prices. Working hard to be the best is what they are all about, and it shows in their products and in the satisfaction of their clients.
